

Distinguish between skeletal muscle and cardiac muscle. (More than just where they are found)

How many times will your heart beat in a lifetime?

Some heart cells can generate their own _____.

What are these cells called?

Describe the intrinsic cardiac conduction system.

Where are the pacemaker cells of the conduction system located?

What is the function of the SA node?

Where does the SA node send its impulses?

Where is the AV node located?

What is the significance of the .1 second delay of the impulse at the AV node?

What are two tricks of a good ventricular contraction?

What is the function of the AV node?

What is the function of the AV bundle (bundle of HIS)

What is the function of the Purkinjie fibers?

When heart muscle cells beat out of synch it is called _____.

Explain how defibrillation works.

Explain the function of CPR and how it works.
